

Activate ESET with confidence.

ESET HOME Security Essential • 1 device • 1 year • Global

Purchased: Pre-activated ESET digital license key

Delivery: Your activation key arrives with your order after payment.

Authorization: Submit your device name(s) after purchase. No information is needed at checkout.

Your four simple steps

1

Receive your key

Open the purchase email and locate your activation key and secure download details.

2

Download and install

Get a compatible app from an official ESET download link on page 2.

3

Activate ESET

Open the app, choose activation with a purchased key, and enter your key exactly as supplied.

4

Send your device details

Visit license.shopping/eset-activation.html and submit your device name. If your devices are connected to your own ESET HOME account, submit that account email instead.

Important: Device names or your own connected ESET HOME account email help us keep your activation authorized. Never share your ESET HOME password, one-time codes, or other account credentials.

Need help? Use our [Contact page](#) and include your order reference and the exact ESET error message if applicable.

Everything you need to finish.

Official ESET software downloads

Only use the applicable application for your device. Installer links can change over time; visit the official ESET site if a link is unavailable.

ESET HOME Security Essential (Windows) • [Official download ↗](#)

ESET Internet Security (Windows) • [Official download ↗](#)

ESET NOD32 Antivirus (Windows) • [Official download ↗](#)

ESET Mobile Security (Android) • [Official download ↗](#)

Which authorization details should I submit?

Send the name of your device. If that device is connected to your own ESET HOME account, you can send the email associated with that account instead.

Find your Windows device name

Windows 10 / 11: Settings → System → About → Device name. Copy the name exactly as shown. On other platforms, check the device information page in system settings.

If you reinstall or rename the device

When possible, uninstall ESET while connected to the internet before reinstalling Windows. After reinstalling, activate again and send your new device name if it changed. For a device transfer or activation problem, contact us with your order reference.

Contact support: license.shopping/contact.html

Submit device details: license.shopping/eset-activation.html

Security: We never need your ESET HOME password or verification codes.
